

**Modern Amtrak
has never
Sounded so good!**

The Kato SOUND BOX DCC-Free Sound Made Easy

With the **ACS-64**, Kato USA has brought out the latest in Amtrak® railroading technology that is used in the American Northwest passenger service - designed as the pinnacle of electric locomotive engineering, it is smooth and quiet...

... but not that quiet!

Available for modelers using DC/Analog on their layouts is a specially designed **Sound Card** for the Kato **Sound box** system which replicates all of the sounds of the ACS-64 locomotive, from the bell to the horn all the way down to the regenerative braking system and the 60-second repeating cabin "stay alert" beep - all sounds captured from a real ACS-64 locomotive by the sound engineers at Soundtraxx!

With the Kato Soundbox and ACS-64 Sound Card you can bring the sounds of this high-tech engine to life, all perfectly synchronized to the operation of the precision Kato engine!

The N Scale ACS-64 Locomotive is one of Kato's latest new engines, featuring legendary drive performance backed up by traction-tire equipped wheels that are capable of pulling Kato Amfleet® cars with ease!

The ACS-64 Sound Card is a plug-and-play add-on for the Sound Box (sold separately) that turns your DC Controller into the cab of a locomotive with realistic sounds at your fingertips!

Item #	Description	MSRP
