

For HO & N
DC Layouts!

Item #22-101-1
MSRP \$279.99

Enjoy BIG Sound without the need for DCC!

Developed as a joint effort between engineers at Kato and Soundtraxx, the new Sound Box is a simple, versatile, and powerful sound system for use on non-DCC layouts. Completely self-contained, the ASB has a built in speaker and will allow modelers to enjoy an "In-Cab" locomotive sound experience while operating their favorite trains!

Swappable sound cards (1 included) allow you to change everything from the horn and bell to the prime mover!

- 🔊 **Works with both HO and N track** - The modular pass-through design of the Analog Sound Box means that it can easily be used for both N and HO scale!
- 🔊 **Choo-choo-choose your sounds** - The Analog Sound Box comes with an included Early EMD 1st Generation Diesel sound chip, but additional diesel, steam and electric sound sets will be available (sold separately) that will allow you to bring nearly any sounds that you desire to your non-DCC layout!
- 🔊 **Smart Back-EMF reading** - The sound box doesn't just make noise - it will read the effort of the motor in your engines to know how hard they're working. Certain sound schemes (like steam where the chuff is directly linked to the visual movement of the side rods) will self-adjust the sound based on the speed of the locomotive so what you hear will match what you see, all without the need for DCC!
- 🔊 **As loud (or as quiet) as you want it** - Have a powerful home stereo system? Or maybe you'd prefer headphones so that you don't wake the neighbors- unlike sound systems that are tied to a locomotive, the Analog Sound Box has a stereo out port so you can connect headphones or speakers of your choice!
