EMD GP35 Phase Ia locomotives from Kato

~ A storied history ~

The EMD GP35 is a 4-axle diesel locomotive, manufactured between 1963 and 1965. More than 1200 locomotives were built for US, Canadian and Mexican railroads in those brief years, as many railroads were upgrading from older EMD or Alco locomotives. Originally designed for General Purpose (hence, GP) mainline duties, over the long lifespan of these locomotives they saw service in everything from mainline operation to switching and branchline service.

- DCC friendly with an 8-pin quick plug for easy and worry-free DCC installation.
- Directional headlights and all-wheel electrical pickup.
- Many sharply molded customer applied handrails and grab irons, including brand new details for this re-release: separate windshield wipers and cab sunshades.
- Phase Ia bodies have 7 upper hood latches on each side and come in both Dynamic and Non-dynamic brake versions, as appropriate.

The HO GP35 - Available with and without DCC at your local hobby shop!
