

# A Blast From the Past

## EMD SD40-2 Mid

Last released in 2007, the SD40-2 at the time was a revolution for Kato's HO design, featuring operating ditchlights (toggleable between steady and flashing modes on both DC and DCC!), fully assembled parts, and prototype specific details like the rear mounted horn and roof AC units on the Santa Fe models.

Today the SD40-2 Mid Production Version remains one of the gold standards of Kato HO Engineering, and is available again in Santa Fe and (coming soon) Burlington Northern, in a paint scheme never before done on this model by Kato in HO! Both models feature ready-to-run detailing, DCC+Sound friendly chassis' and Kato's legendary motorized drive!
